

Innovations and Transformations in Pharmaceutical Sciences (ITPS)

ITPS is a summer learning experience hosted annually by the UNC Eshelman School of Pharmacy. This year, we are offering 2 options for participants to attend this program virtually. For the first time ever, participants will have the opportunity to take this course for 4 UNC credit hours and receive an official UNC transcript upon successful completion of all assignments. We invite all current and future scientists and pharmacists to join us for this unique and engaging program.

Innovations and Transformations in Pharmaceutical Sciences is a 3-week course offered to learners around the world by the No. 1-ranked school of pharmacy in the United States. Through this program, participants will develop their knowledge and skills in key areas including the drug development pipeline (from discovery and delivery to outcomes and practice), pharmaceutical sciences, pharmacy practice, and professional development.

ITPS will expose learners to world class professors, cutting edge research, and innovative technologies as we explore the lifecycle of drugs and vaccines in our modern world.

Virtual participants will have the option to join lectures live or watch recordings at their convenience.

"I feel very honored to be able to listen to the lectures of the world's top pharmaceutical scientists, and I did learn a lot of basic knowledge.

The most important thing is that this activity completely ignited my enthusiasm for pharmaceutical research and I hope that I can develop in this field in the future."

– ITPS 2020 Participant
